

2020 Safety Certificate Provides an Emphasis on Silica, Silicosis, and Implementing a Silica Exposure Control Plan

This certificate program includes training materials for silica, slab handling, and creating a silica exposure control plan.

SILICA RESOURCES INCLUDE:

- ▶ **SAMPLE SILICA EXPOSURE CONTROL PLAN**
(template developed for fabricators in accordance with OSHA ruling 29 CFR 1910.1053)
- ▶ **SILICOSIS PREVENTION HANDBOOK**
- ▶ **SAFETY POSTERS**
- ▶ **WEBINARS:**
 - Silicosis: An Industry Guide to Awareness and Prevention
 - Silica Exposure Standard and OSHA Compliance
 - Implementing a Silica Exposure Control Plan for Your Company
 - How to Use the OSHA Voluntary Inspection Program to Monitor Silica Exposure

▶ VIDEOS:

- Silica Overview: Causes of Silicosis
- Silica Testing: Baseline Testing for Individuals and Facilities
- Silicosis Prevention: Worker Safety Precautions

▶ TOOLBOX TALKS:

- What Is Crystalline Silica?
- Crystalline Silica Exposure Prevention

SAFETY MANAGERS CAN USE THIS PROGRAM TO:

- Broaden employee awareness
- Conduct a risk assessment
- Implement best practices to control exposure
- Review the program with the company's insurance carrier to discuss premium discounts

This 8-hour online certificate provides training materials for silica, as well as slab handling and creating a safety program. To complete this certificate, one designated safety manager must complete and pass all designated safety courses, download safety materials, and pass associated test. Upon completion of all courses, applicants will be asked to submit an evaluation checklist. Participants who meet all requirements will then be issued a certificate of completion.
